

Machine Learning

CHAPTER 1: Computational Foundations of Machine Learning

- 1.1 Formal Definition of Machine Learning
- 1.2 Machine Learning vs Traditional Programming
- 1.3 Relationship between Artificial Intelligence, Machine Learning, and Deep Learning
- 1.4 Types of Problems Solved Using Machine Learning
- 1.5 Learning Systems and Problem Formulation
- 1.6 Real-World Constraints in Machine Learning
- 1.7 Scope, Applications, and Limitations of Machine Learning

CHAPTER 2: Mathematical Foundations of Machine Learning

- 2.1 Linear Algebra for Machine Learning
- 2.2 Vector Spaces and Matrix Operations
- 2.3 Eigenvalues, Eigenvectors, and Matrix Decomposition
- 2.4 Calculus for Optimization
- 2.5 Partial Derivatives and Gradients
- 2.6 Probability Theory Fundamentals
- 2.7 Random Variables and Probability Distributions
- 2.8 Bayesian Probability and Inference
- 2.9 Information Theory Concepts
- 2.10 Optimization Theory and Algorithms

CHAPTER 3: Statistical Learning Theory

- 3.1 Statistical Modeling Concepts
- 3.2 Estimation Theory
- 3.3 Bias–Variance Tradeoff
- 3.4 Empirical Risk Minimization

- 3.5 Structural Risk Minimization
- 3.6 Model Capacity and Complexity
- 3.7 VC Dimension
- 3.8 Generalization Theory

CHAPTER 4: Data in Machine Learning

- 4.1 Nature and Types of Data
- 4.2 Data Collection Methods
- 4.3 Data Quality and Data Integrity
- 4.4 Data Preprocessing Techniques
- 4.5 Feature Engineering Principles
- 4.6 Feature Selection Techniques
- 4.7 Dimensionality Reduction
- 4.8 Handling Missing, Noisy, and Imbalanced Data
- 4.9 Data Leakage and Its Consequences

CHAPTER 5: Learning Paradigms

- 5.1 Supervised Learning
- 5.2 Unsupervised Learning
- 5.3 Semi-Supervised Learning
- 5.4 Self-Supervised Learning
- 5.5 Reinforcement Learning
- 5.6 Online Learning
- 5.7 Batch Learning
- 5.8 Parametric vs Non-Parametric Learning

CHAPTER 6: Core Machine Learning Algorithms

- 6.1 Linear Regression
- 6.2 Logistic Regression
- 6.3 k-Nearest Neighbors
- 6.4 Decision Trees

- 6.5 Naive Bayes Classifier
- 6.6 Support Vector Machines
- 6.7 Ensemble Learning Techniques
- 6.8 Kernel-Based Learning Methods

CHAPTER 7: Neural Networks and Deep Learning

- 7.1 Artificial Neurons and Activation Functions
- 7.2 Feedforward Neural Networks
- 7.3 Backpropagation Algorithm
- 7.4 Optimization in Neural Networks
- 7.5 Convolutional Neural Networks
- 7.6 Recurrent Neural Networks
- 7.7 Attention Mechanisms
- 7.8 Transformer Architectures

CHAPTER 8: Model Evaluation and Validation

- 8.1 Training, Validation, and Test Sets
- 8.2 Performance Metrics for Classification
- 8.3 Performance Metrics for Regression
- 8.4 Cross-Validation Techniques
- 8.5 Hyperparameter Optimization
- 8.6 Error Analysis
- 8.7 Statistical Significance Testing

CHAPTER 9: Model Generalization and Regularization

- 9.1 Overfitting and Underfitting
- 9.2 Regularization Techniques
- 9.3 Learning Curves
- 9.4 Early Stopping
- 9.5 Model Selection Strategies
- 9.6 Sample Complexity

CHAPTER 10: Scalability and System Design

- 10.1 Computational Complexity of ML Algorithms
- 10.2 Time and Space Trade-offs
- 10.3 Distributed Machine Learning
- 10.4 Parallel Training Techniques
- 10.5 Hardware Acceleration (GPU, TPU)
- 10.6 Large-Scale Data Processing

CHAPTER 11: Deployment and MLOps

- 11.1 Model Deployment Strategies
- 11.2 Model Serving Architectures
- 11.3 Model Monitoring and Logging
- 11.4 Data Drift and Concept Drift
- 11.5 Model Retraining Pipelines
- 11.6 Version Control for Models
- 11.7 CI/CD for Machine Learning

CHAPTER 12: Interpretability, Ethics, and Security

- 12.1 Model Interpretability and Explainability
- 12.2 Fairness and Bias in Machine Learning
- 12.3 Privacy-Preserving Machine Learning
- 12.4 Adversarial Machine Learning
- 12.5 Security Threats in ML Systems
- 12.6 Ethical Challenges in AI Systems

CHAPTER 13: Advanced Topics

- 13.1 Probabilistic Graphical Models
- 13.2 Representation Learning
- 13.3 Meta-Learning
- 13.4 Transfer Learning

13.5 Federated Learning

13.6 AutoML

13.7 Open Research Problems in Machine Learning
